This piece is the result of work carried out in 2021 as part of a collaborative project between UNESCO and the Redalyc Scientific Information System. The project had the collaboration of the Government of Angola through the Ministério do Ensino Superior, Ciência, Tecnologia e Inovação (MESCTI), the Universidad Autónoma del Estado de México (Mexico), AmeliCA and the Universidade Óscar Ribas (Angola), and its objective was to carry out a comprehensive diagnosis of scientific communication in Angola, a critical roadmap for the development of Open Access in the country and a series of technological developments in favor of non-commercial open scientific communication. The project resulted in a set of 38 works that are made public with the aim of contributing and influencing a technological, legal and knowledge infrastructure of non-commercial Open Access in Angola.

I. Introduction

A crucial part of "Acesso Aberto Angola" project strategy, and the previous diagnosis to it, was the identification of the key stakeholders that could participate in the project, as well as having an impact, of any kind, on the development of the work in its different objectives. To do so, we worked together with the Universidad Óscar Ribas to identify the key stakeholders in the academic-scientific and political spheres of Angola, classifying them into three categories: 1) Academic authorities; 2) Outstanding researchers and/or professors from universities, research centers and higher education institutions; 3) Political authorities and various stakeholders with political influence in the educational, scientific and technological context.

The identification of these stakeholders was followed by an invitation to participate in two project objectives: the series of focus groups that took place in September, October and November 2021 (*Qualitative Analysis on Open Access and Open Data in Angola*), and the digital survey distributed during the month of November 2021 (*Demoscopic study on Open Access and Open Data addressed to the Angolan academic-scientific community*), both with the objective of understanding the needs and perceptions of Angola regarding Open Access and Open Science. In addition to academic authorities, professors-researchers and policymakers, the focus group and survey also considered the Angolan higher education and graduate student community.

The report of key stakeholders in each category is shown below, as well as information regarding their institutional affiliation and means of contact¹.

III. Recommendations

1. The report presented can be considered as information input for the construction or strengthening of a formal network of stakeholders in the field of Education, Science and Technology. For example, in the constitution of formal research networks by area of knowledge or in the constitution of any collaborative network according to the needs identified by Angola.
2. To comprehensively diversify the stakeholders in each category according to gender, geographic space, field of knowledge, diversity of academic backgrounds, etc.
3. To strengthen the identification of stakeholders in the most relevant fields of knowledge according to the needs identified by Angola, specifically those related to access to knowledge, Open Science and Open Access.
